

ZIP AWNINGS

FACTSHEET

THE STRONGEST CHANNEL AWNING

Zip Awnings offer extra strength to an otherwise standard straight-drop awning. The Zip Awning features side channels where the fabric is fitted using a hidden zip. The zip opens and closes during operation and is able to withstand gentle winds, making it perfect for outdoor entertaining areas.

Zip Awnings can also be motorized.

TECHNICAL INFORMATION

ZIP SYSTEM

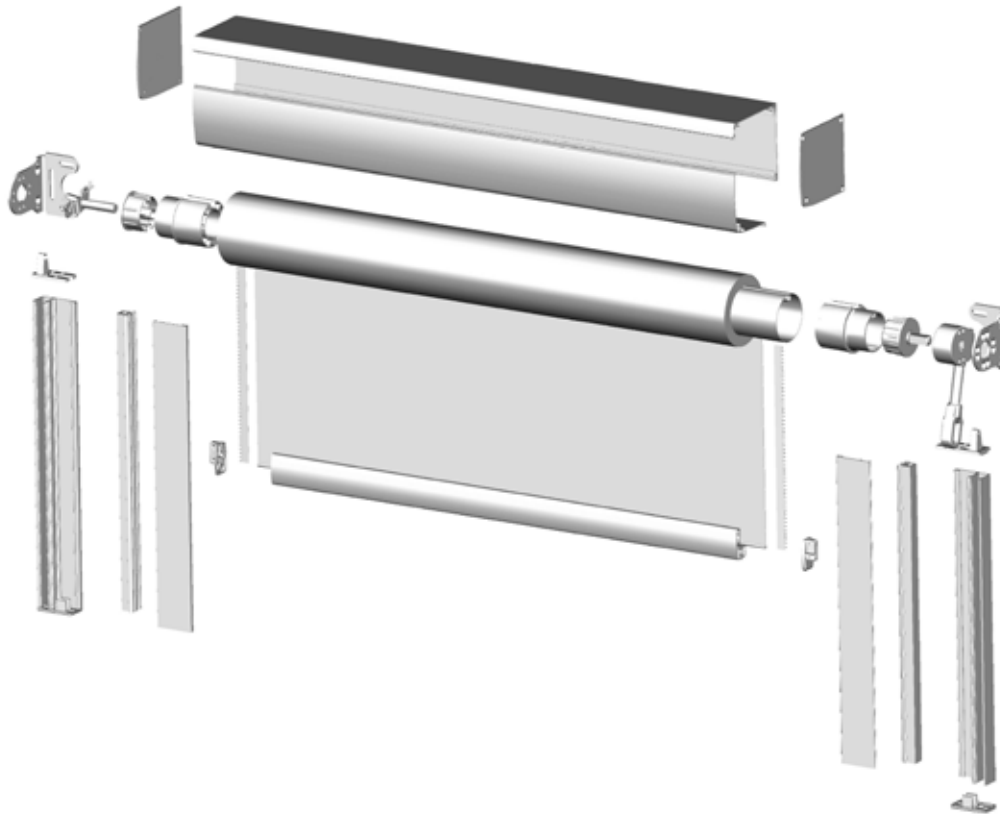

The channels either side of the Zip Awning house and conceal a zip, which holds the fabric in place and prevents the fabric from dislodging. As the awning is raised or lowered, the zip automatically opens and closes to allow movement. The Zip Awning is the strongest of all the channel awning systems and offers the most wind resistance.

OPERATION

The Zip Awning operates by crank control, which is simple and easy to use and requires very little effort. The Zip Awning can also be motorised with a Wynmotion motor.

BENEFITS

RANGE OF FABRICS

The Zip Awning can be made with sunscreen, acrylic, or canvas fabric all of which are effective in blocking harmful UV rays.

CHILD-SAFE

The lack of cords or cables adds an extra level of child-safety.

AUTOMATION

Ability to be automated for greater convenience.
